Skilled LGV

Skilled LGV is a Laser Guided Vehicle system which, together with the palletizing systems SKILLED ROBOTS, allows complete "end of line" automation. This results in cost savings and significant improvements in production management.

Skilled LGV es un sistema de Vehículos de Guía Láser que, en combinación con los sistemas de paletización SKILLED ROBOTS, permite una completa automatización del final de la línea, con un notable ahorro económico y un seguro aumento de la eficiencia en la gestión de la producción.

Skilled LGV offers the following advantages:

Transportation of different products and pallets, coming from different production lines, from and to the storage and trucking area (with total exclusion of conveyor work);

Compliance with the current safety rules and regulations;

Thanks to its modularity the system can easily be adapted to future production needs;

Extremely easy installation at customer's site, that saves productivity time.

El sistema Skilled LGV garantiza las siguientes ventajas:

Manipulación completa de productos y palets diferentes procedentes de varias líneas de producción, desde y hacia el depósito de almacenamiento y/o envío (con la completa eliminación de los transportadores de rodillos);

Sistema modular que por lo tanto se puede adaptar fácilmente a las futuras exigencias de producción;

Facilidad de instalación en la fábrica del cliente, limitando al mínimo la detención de la producción;

Perfecto cumplimiento en materia de seguridad con cuanto establecido en las normativas vigentes.

Models
1400XL
1400
1000
800

Distinctive features of the different models and sizes

SKILLED 800 S or M model with counterbalance and wheels included in the machine's frame
 Standard lifting height up to: 1000 mm-S/1500mm-M
 Loading capacity up to: 500 kg-S/800Kg-M

SKILLED 1000 M or L model with counterbalance and wheels included in the machine's frame
 Standard lifting height up to: 2000 mm-M/4000mm-L
 Loading capacity up to: 1200 kg-M/1500Kg-L

SKILLED 1400 M or L model with advanced wheels
 Standard lifting height up to: 2500 mm-M/4000mm-L
 Loading capacity up to: 1500 kg-M/2500Kg-L

SKILLED 1400 XL with counterbalance and wheels included in the machine's frame
 Standard lifting height up to: 4000 mm-M/8500mm-L
 Loading capacity up to: 1500 kg-M/1800Kg-L

NOTE: Min. and max. loading capacity is depending on the lifting height.

OPTIONS

Possibility to have the top pressure for unstable pallets.
 Battery : manual change, automatic change, independent automatic re-charging.

Características peculiares de los modelos y tamaños

SKILLED 800 versión S o M con contrapeso y ruedas incluidas en el cuerpo de la máquina
 Altura de elevación estándar hasta: 1000 mm-S/1500mm-M
 Capacidad de carga hasta: 500 kg-S/800Kg-M

SKILLED 1000 versión M o L con contrapeso y ruedas incluidas en el cuerpo de la máquina
 *Altura de elevación estándar hasta: 2000 mm-M/4000mm-L
 Capacidad de carga hasta: 1200 kg-M/1500Kg-L

SKILLED 1400 versión M o L con ruedas avanzadas
 Altura de elevación estándar hasta: 2500 mm-M/4000mm-L
 Capacidad de carga hasta: 1500 kg-M/2500Kg-L

SKILLED 1400 XL con contrapeso y ruedas incluidas en el cuerpo de la máquina
 Altura de elevación estándar hasta: 4000 mm-M/8500mm-L
 Capacidad de carga hasta: 1500 kg-M/1800Kg-L

NOTA: Las diversas capacidades de carga mínimas y máximas dependen de la altura de elevación.

EN OPCIÓN

Montaje de dispositivo prensor para pallet inestable.
 Baterías: cambio manual, cambio automático, auto-recarga automática.

Software and controls

Stationary master controller unit

The Master Controller Unit consists of a PC running Windows which constantly maintains the contact between the central control unit and the vehicle. The most important activities are:

- Communication with the vehicles;
- Receipt of orders;
- Optimization of Skilled LGV's time and functions;
- Management of vehicle's traffic.

The operator can monitor, on a graphic display, the position and the state of Skilled LGV, at any time.

Unidad de control principal (estacionario)

El estacionario consta de un PC, con sistema operativo Windows, que, utilizando un novedoso sistema multifrecuencia, mantiene constantemente el contacto entre la unidad de control central y los vehículos.

Sus actividades principales son:

- Comunicación con los vehículos;
- Recepción de las operaciones que se deben ejecutar;
- Optimización de la elección del Skilled LGV en función de la operación requerida;
- Gestión del tráfico.

El operador, a través de la interfaz PC puede controlar en tiempo real la posición y el estado de los Skilled LGV.

General features	Description
Type of battery:	Gel / Lead
Driving system:	Motors 48 V DC
Wheel configuration :	3 wheels, 1 with single steering
Frame:	Steel
Brake system:	Electromagnetic on motor's shaft
Precision:	± 10 mm
Speed range:	1,8 m/sec
Standard pallet handling:	1200x800 , 1200x1000
Fork lifting speed:	from 0,1 m/s to 0,5 m/s

Especificaciones generales	Descripción
Tipo de batería:	Gel / Plomo
Sistema de guía:	Motores 48 V DC
Configuración de las ruedas de guía:	3 ruedas, de las cuales una de viraje simple
Bastidor del carro:	Acero
Sistema de frenado:	Electromagnético en el árbol motor
Precisión:	± 10 mm
Velocidad	1,8 m/sec
Pallets estándar manipulables:	1200x800 , 1200x1000
Velocidad de elevación de horquilla:	de 0,1 m/s a 0,5 m/s

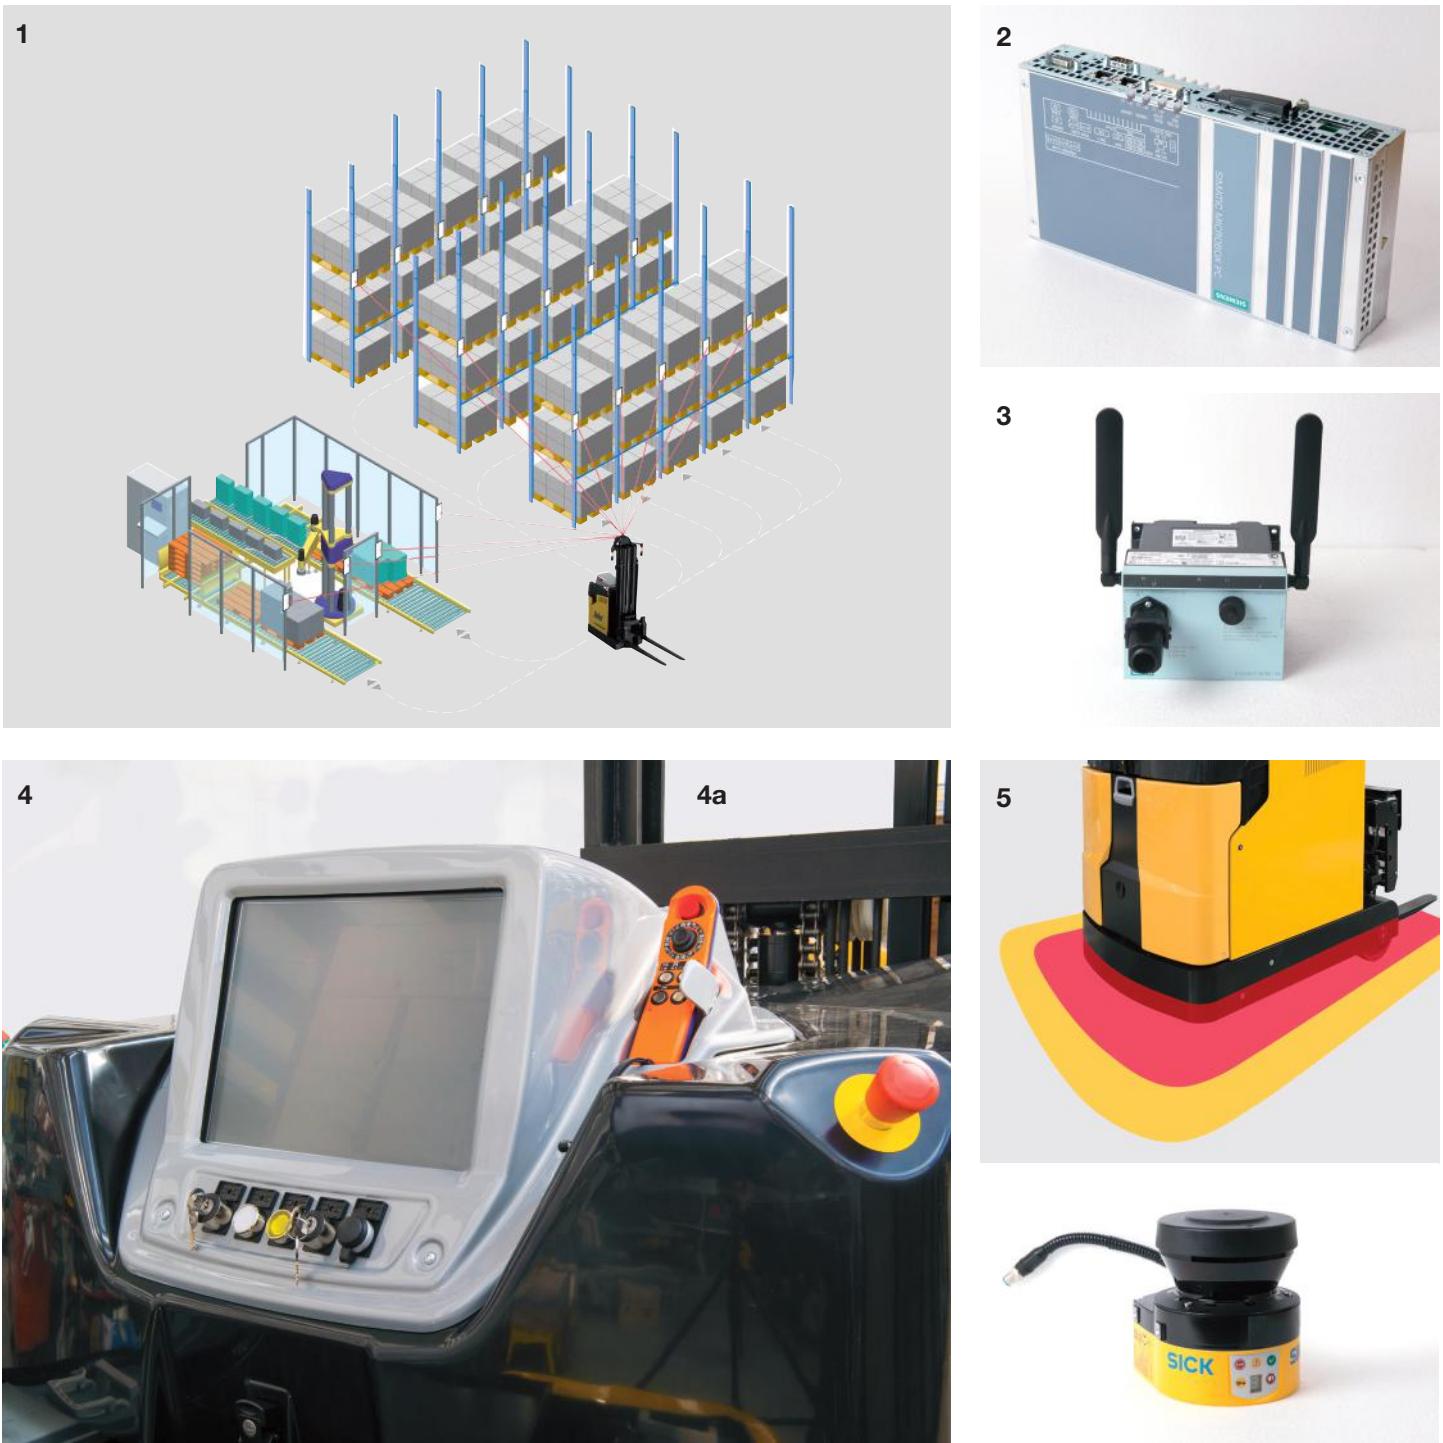

Battery charging station

The vehicle recognises when the battery is low, and it automatically moves to the battery changing station. The battery has an endurance of 8 ongoing hours, whereas the recharge requires less than 8 hours. Therefore, a 24 hour/7 days performance is guaranteed with only 2 battery sets.

Estación carga baterías

El vehículo reconoce cuando su batería está agotándose y se posiciona automáticamente en la específica estación para la carga de las baterías. Las baterías tienen una autonomía de 8 horas, mientras que para su recarga es suficiente un tiempo inferior; por lo tanto, con 2 baterías, se asegura el funcionamiento continuo del vehículo para 24 horas.

Laser Navigation System

Skilled LGV components

Finales de carrera Skilled LGV	ERSCE

The laser guiding system is similar to an electronic "eye" which, by means of reflectors positioned on the surrounding walls uses "triangulation" to determine the exact position of the vehicle to allow it to carry out its required tasks in the operating area.

Advantages:

- No floor works required (magnetic tape/coloured tapes or lines, etc)
- Route changes can be easily made via CAD system

1 - Laser scanner

The position of the vehicle is updated 8 times a second to ensure supreme accuracy. A sophisticated filtering system excludes reflected signals from other sources such as bright walls, windows, etc. The security class 1 laser is harmless to humans and is not visible to the naked eye.

2 - Vehicle control

This unit carries out the following functions:

- Laser scanner interface;
- Driving wheel speed control;
- Management of pallet loading and unloading with possibility of personalizing the sequence by programming the inner PLC;
- Communication with radio remote control and the control unit;
- Communication with the stationary control unit.

3 - Radio communication

The radio is a client Ethernet wireless (WLAN) that communicates with the other machines connected to the installation Ethernet through one or more access points. The standard communication WiFi uses a frequency of 2,4GHz or 5GHz which does not require any official authorization.

4 - Control unit

The control unit has been designed so that the operator can carry out non-automatic operations and display vehicle status and diagnostics. The 15" screen is large, ergonomic, with "touch" commands and anti-reflective opaque glass.

The icons are big and intuitive.

In particular, the following functions are available:

- Display of vehicle position;
- Display and control of operating mode
- Display of I/O status
- Display of diagnostics and alarms
- Synoptic 3D with graphic information on the vehicle
- Self-insertion on the programmed plan

4a - Radio remote control to move the vehicle manually.

- Drive speed controlled by the inclination angle.
- Vibration of the transmitter indicates the activation of the inclination function and the speed
- innovative and useful micro joystick
- 4 single-step buttons, including 2 buttons for pre-selection.
- Intelligent frequency management (2,4 GHz technology).
- Micro / orthogonal drive (pre-selection).
- STOP impact switch.
- LED for the indication of operation/ battery status.
- Rechargeable NiMH exchange battery, ca. 11 hours of continuous operating time
- Robust plastic housing, protection class IP 65.
- Shock-off / zero-g

5 - Safety Devices

Euroimpianti is very perceptive to the safety of the working environment. The Skilled LGV is equipped with 3 anti-collision PLS sensors.

Advantages:

- possibility of adapting the monitoring safety range directly to the dangerous area of the machine;
- easy access to working area, due to the absence of receivers or supplementary reflectors;
- the safety area is dynamic and can be set up following the different requirements of the system;
- the action area of the safety system changes automatically following the direction and the mode (manual/automatic) of the Skilled LGV. Moreover the reading distance of this area increases in proportion to a moving speed.

The system of guide laser is an "eye" that, through reflectors installed on the walls and a reading system via triangulation, allows to know with exactitude the position of the vehicle and guide it during its programmed displacements.

Ventajas:

- ninguna intervención en el piso (corte, cinta magnéticas, tiras de colores, etc.);
- la modificación del recorrido de los vehículos resulta extremadamente simple y se consigue mediante CAD.

1 - Escáner láser

The position of the vehicle is updated 8 times per second, to ensure a high level of precision. A sophisticated filtering system intercepts false reflections from other sources (for example, windows or shiny walls) and decides its exclusion for the calculation of positions. The laser beam, of class 1 security, is harmless to people and cannot be seen at a simple glance.

2 - Control del vehículo

This unit performs the following functions:

- Interface with the laser scanner;
- Control of the speed of the motorized wheel;
- Management of the loading and unloading of the pallet, with possibility of personalizing the sequence, via the PLC program;
- Communication with the radio remote control and the control unit;
- Communication with the stationary control unit;

3 - Radio de comunicación

The radio is a client of Ethernet wireless (WLAN) that communicates with the other machines connected to the installation Ethernet through one or more access points.

The standard communication WiFi uses a frequency of 2,4GHz or 5GHz which does not require any official authorization.

4 - Consola de mandos

The control console is a unit established for the execution of non-automatic operations and vehicle status and diagnostics display. The 15" screen is large, ergonomic, with "touch" commands and anti-reflective opaque glass.

The icons are very large and intuitive.

In particular, the following characteristics are available:

- Location of the vehicle;
- View and control the mode of operation
- State of I/O

- Diagnóstico y alarmas
- Cuadro sinóptico 3D con información sobre el vehículo
- Inserción automática en la pista programada

4a - Radio mando para movimientos manuales del vehículo

- Velocidad de marcha controlada por el ángulo de inclinación.
- Vibración del transmisor indica la activación de la función de inclinación y la velocidad
- Micro joystick innovador y muy funcional
- 4 botones single-step, de los cuales 2 botones para la pre-selección.
- Gestión inteligente de la frecuencia (2,4 GHz tecnología).
- Micro / accionamiento ortogonal (pre-selección).
- Interruptor impacto STOP.
- LED para la indicación del estado de funcionamiento / batería.
- Batería recargable NiMH cambiar, aprox.. 11 horas de funcionamiento continuo
- Carcasa de plástico robusta, clase de protección IP 65.
- Shock-off / cero-g

5 - Dispositivos de seguridad

In compliance with the laws in force in the field of safety in the working environment, Euroimpianti has incorporated into its Skilled LGV vehicles sophisticated safety devices. In fact, the Skilled LGV is equipped with 3 PLS (Proximity Scanner) devices.

Ventajas:

- possibility of adapting the action area of the control directly to the dangerous area of the machine;
- easy access to working area, due to the absence of receivers or supplementary reflectors;
- the safety area is dynamic and can be set up following the different requirements of the system;
- the action area of the safety system changes automatically following the direction and the mode (manual/automatic) of the Skilled LGV. Moreover the reading distance of this area increases in proportion to a moving speed.

In particular, the following characteristics are available:

- Location of the vehicle;
- View and control the mode of operation
- State of I/O

All the systems can be equipped with VPN SERVICE, through which the customer can connect via Internet with Euroimpianti's After-sale Service for a prompt diagnosis and resolution of many problems. The VPN SERVICE can also be used to update the software and to monitor the functioning of the system.

Todas las instalaciones se pueden dotar con SERVICIO VPN, que permite al cliente conectarse vía Internet con el Servicio de Asistencia Euroimpianti para obtener un diagnóstico inmediato y la solución para la mayoría de los problemas. El SERVICIO VPN se puede usar también para poner al día el software y tener bajo control el sistema y su funcionamiento.
